

Workshop Peatlands and Forests in the Climate Architecture

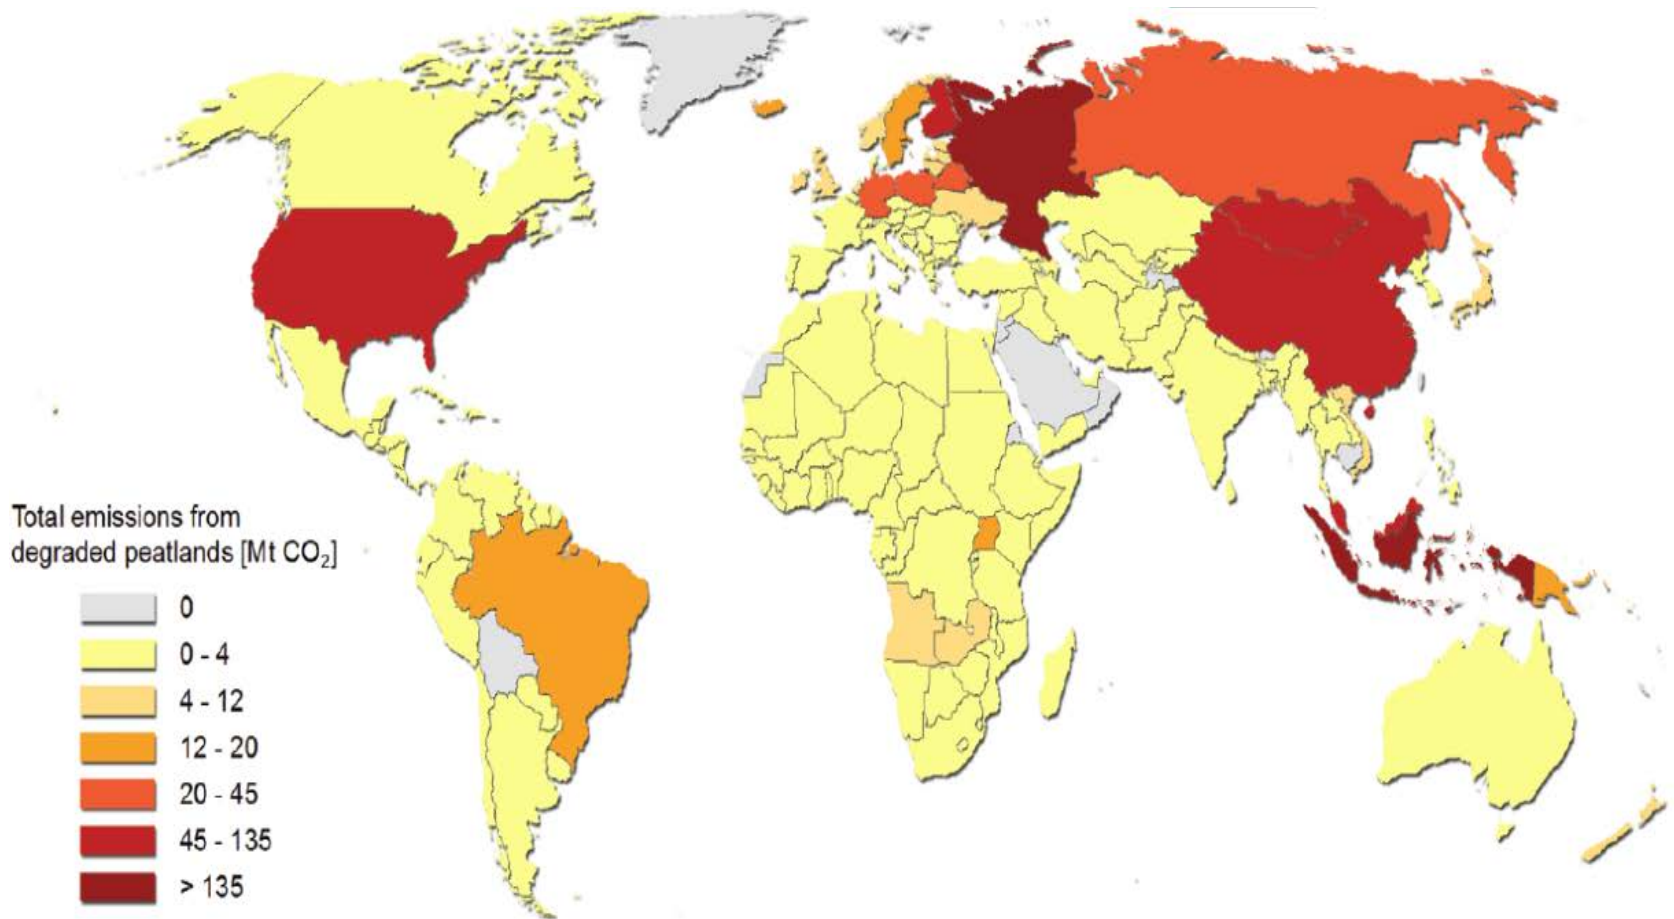

Introduction

Corinna Gather, DEHSt, E 1.6

Bonn, 4 June 2015

Emissions from peatlands by country (excluding fires)

based on data from the IMCG Global Peatland Database, Joosten 2009 (map: Stephan Busse)

Working Paper

You can download
the report at
www.dehst.de

Objective of the Study

1. Status Quo

Analyze the current situation at the UN and at the EU level

2. Policy Options

Develop and explore potential possible policy options

3. Evaluate the Options

Evaluate the options with help of six criteria

environmental integrity, fairness, governance, transaction costs, effectiveness and political viability

4. Draw Recommendations

Draw concret recommendations for the selected options

Thank you for your attention!

Corinna Gather
